

# CTSC

CENTER FOR TRUSTWORTHY  
SCIENTIFIC CYBERINFRASTRUCTURE  
The NSF Cybersecurity Center of Excellence

# Cybersecurity for the Modern Science Gateway

---

*Von Welch and Mark Krenz*

*SGCI Webinar*

*February 14th, 2018*

# Science Gateways Cybersecurity

## Three Key Aspects

---

1. Secure Software Development and Engineering
2. Identity and Access Control Management
3. Operational Cybersecurity

# Science Gateways Cybersecurity

## Three Key Goals

---

1. Maintain the trust of your resource providers
2. Maintain the trust of your community
3. Protect, as appropriate, the confidentiality, integrity, and availability of your key assets.

# A Quick Overview of Resources...

---

"Best practices for science gateway security include the standard recommendations for any online service, plus science gateway specific concerns"

*Science Gateway Security Recommendations; Basney, Welch; 2013*  
<http://www.ncsa.illinois.edu/People/jbasney/201309-gwsec.pdf>

---

# CIS Top 20

---

- <https://www.cisecurity.org/controls/>
- Eliminates majority of organizations vulnerabilities
- Overview of top 5
  - Inventory of Authorized and Unauthorized Devices
  - Inventory of Authorized and Unauthorized Software
  - Secure Configurations for Hardware and Software
  - Continuous Vulnerability Assessment and Remediation
  - Controlled Use of Administrative Privileges

# CIS Top 20

<https://www.cisecurity.org/controls/>

## Inventory of Authorized and Unauthorized Devices

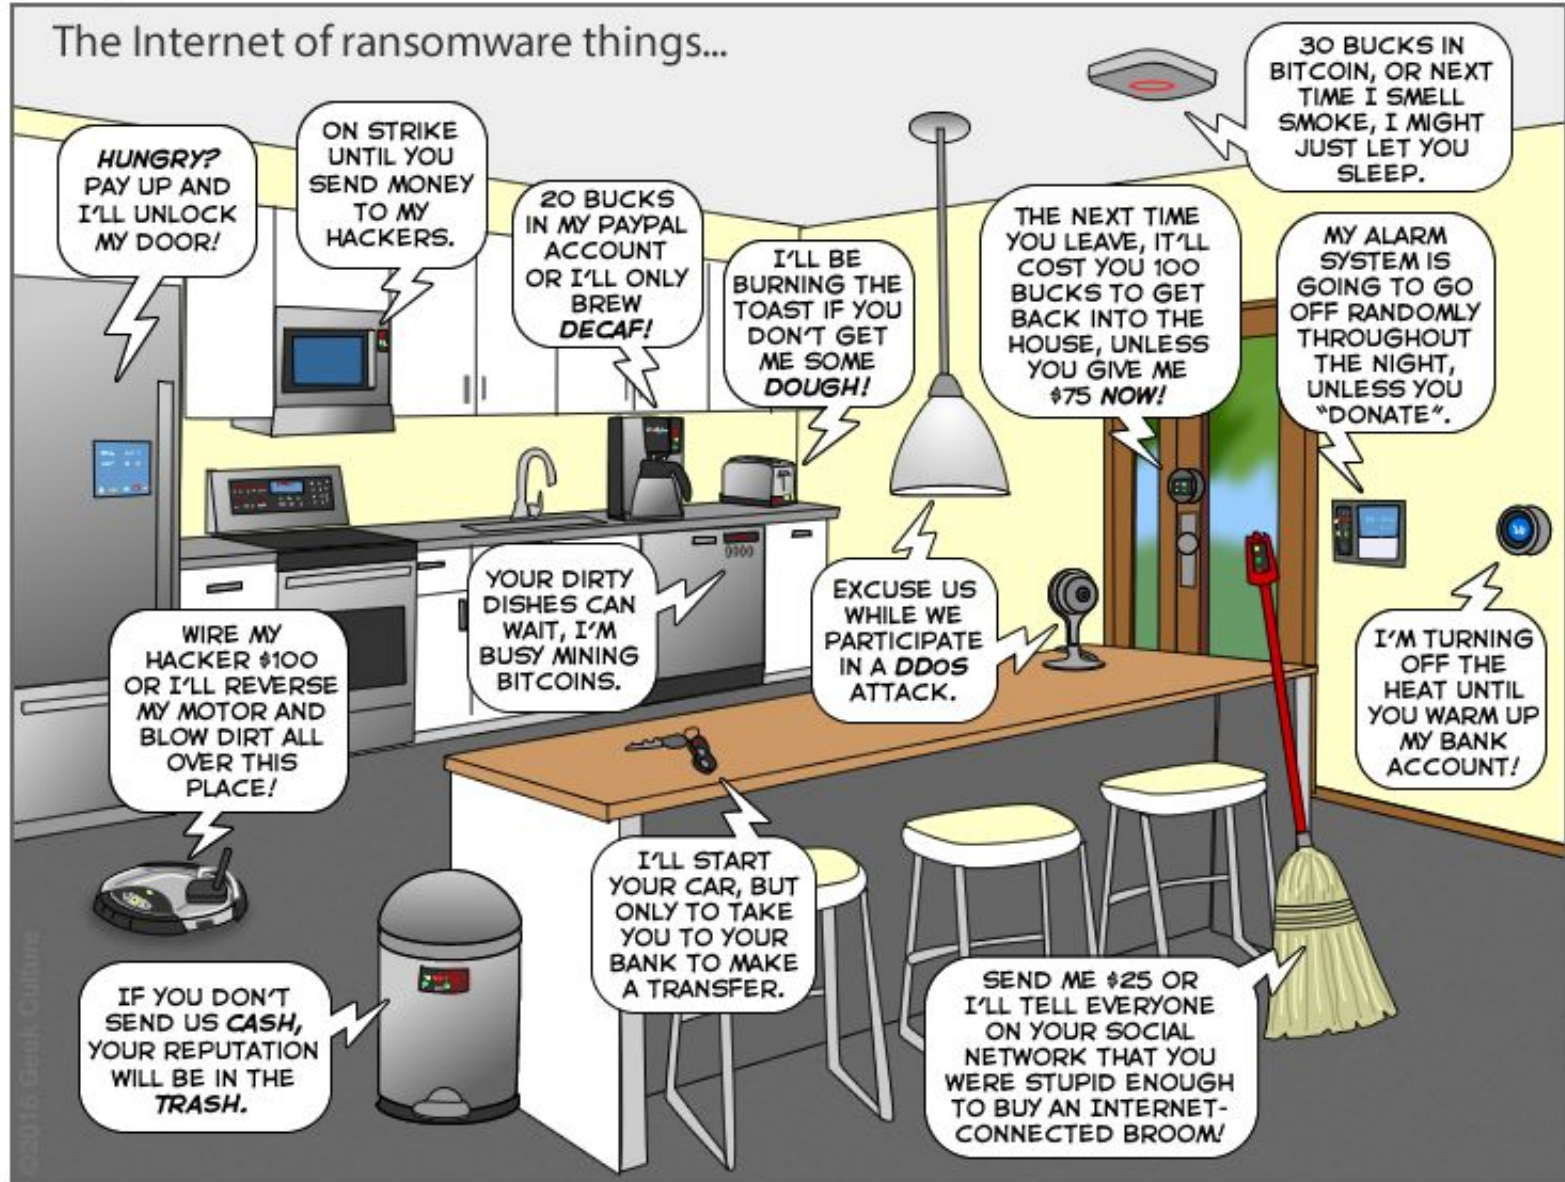

Source: Shutterstock

- Determine business needs for hardware
- Write/enforce policy
- DHCP Logs and Network scans to detect new hosts

# The Internet of ransomware things...

You can help us keep the comics coming by becoming a patron!  
[www.patreon.com/joyoftech](http://www.patreon.com/joyoftech)

[joyoftech.com](http://joyoftech.com)

# CIS Top 20

<https://www.cisecurity.org/controls/>

---

## Inventory of Authorized and Unauthorized Software

- Determine need for tasks
- Write/enforce policy
- Run a tight ship
- Use isolated system to evaluate new software
- Removed unneeded software from systems

# CIS Top 20

<https://www.cisecurity.org/controls/>

---

## Secure Configurations for Hardware and Software

- OS and software security hardening guide  
(How to secure *X*)
- Isolate functionality if possible

# CIS Top 20

<https://www.cisecurity.org/controls/>

---

## Continuous Vulnerability Assessment and Remediation

- Subscribe to notifications for software you use
- Subscribe to general security notification lists
  - Bugtraq  
<http://seclists.org/bugtraq/>
  - CTSC Cyberinfrastructure vulnerability list  
<https://list.iu.edu/sympa/info/cv-announce-l>
- Review system logs for attacks
- Scan your network for vulnerable software
  - OpenVAS
  - [ssllabs.com](https://www.ssllabs.com)

# CIS Top 20

<https://www.cisecurity.org/controls/>

---

## Controlled Use of Administrative Privileges

- More serious exploits possible
- Don't be admin all the time
- Use sudo on Unix/Linux
- Restrict access to administrative accounts
  - Very strong password or disable login
  - Different from other passwords
  - Limit people who can access
- Dedicated user for services
- Set up two-factor auth for admin access

# Secure Software Development and Engineering

---

NSF “CI Framework for 21st century” (CIF21)

Software must be reliable, robust, and secure; able to produce trustable and reproducible scientific results;

...

# Software Engineering

## A Required Foundation

---

- Repositories/Hosting
- Testing
- Static Program Analysis
- Vulnerability Management
- Release & Delivery
- Coding/Project Tools
- Documentation

“Secure Software Engineering Best Practices”

Randy Heiland and Susan Sons

<http://hdl.handle.net/2022/21322>

# Software Engineering

## Repositories/Hosting

---

- Version Control
  - git
  - mercurial (hg)
- Hosting providers
  - Check permissions available for dev teams.
- Proper recovery from sensitive data leaks

# Software Engineering Testing

---

- Unit testing
- Functional testing
- Testing the process

“Secure Software Engineering Best Practices”

Randy Heiland and Susan Sons

<http://hdl.handle.net/2022/21322>

# Software Engineering

## Static Analysis

---

- Code analysis for weaknesses
- Automated tools
  - Tools vary by language
  - Cloud services that help

“Secure Software Engineering Best Practices”

Randy Heiland and Susan Sons

<http://hdl.handle.net/2022/21322>

# SWAMP Features ( [continuousassurance.org](http://continuousassurance.org) )

SWAMP [i About](#) [Contact](#) [Resources](#) [Policies](#) [? Help](#)

## Features of the SWAMP

### Languages supported

- C/C++
- Java source
- Java bytecode
- Python
- Ruby
- PHP
- Javascript
- HTML
- CSS
- XML

### Tools supported

#### Open tools

- Android lint
- Bandit
- Brakeman
- checkstyle
- Clang Static Analyzer
- cppcheck
- CSS Lint
- Dawn
- error-prone
- ESLint
- Findbugs
- Flake8
- Flow
- GCC
- HTML Tidy
- JSHint
- OWASP Dependency Check
- PHPMD
- PHP\_CodeSniffer
- PMD
- Pylint
- Reek
- Retire.js
- RevealDroid
- RuboCop
- ruby-lint
- SpotBugs
- XML Lint

#### Commercial tools

- GrammaTech CodeSonar
- Parasoft C/C++test
- Parasoft Jtest
- Synopsys Static Analysis (Coverity)

### Platforms supported

- Android
- CentOS
- Debian
- Fedora
- Scientific
- Ubuntu

#### Upcoming:

- Mac OS X
- Microsoft Windows

# Software Engineering

## Vulnerability Management

---

- Have a process for assessing and patching.
  - Notifying the appropriate people
  - Fixing / Patching
  - Testing the fix/patch
  - Communicating the fix
- What if you're software is open source?

“Secure Software Engineering Best Practices”

Randy Heiland and Susan Sons

<http://hdl.handle.net/2022/21322>

# Software Engineering Release & Delivery

---

- Checksums
- Cryptographic code signing

“Secure Software Engineering Best Practices”

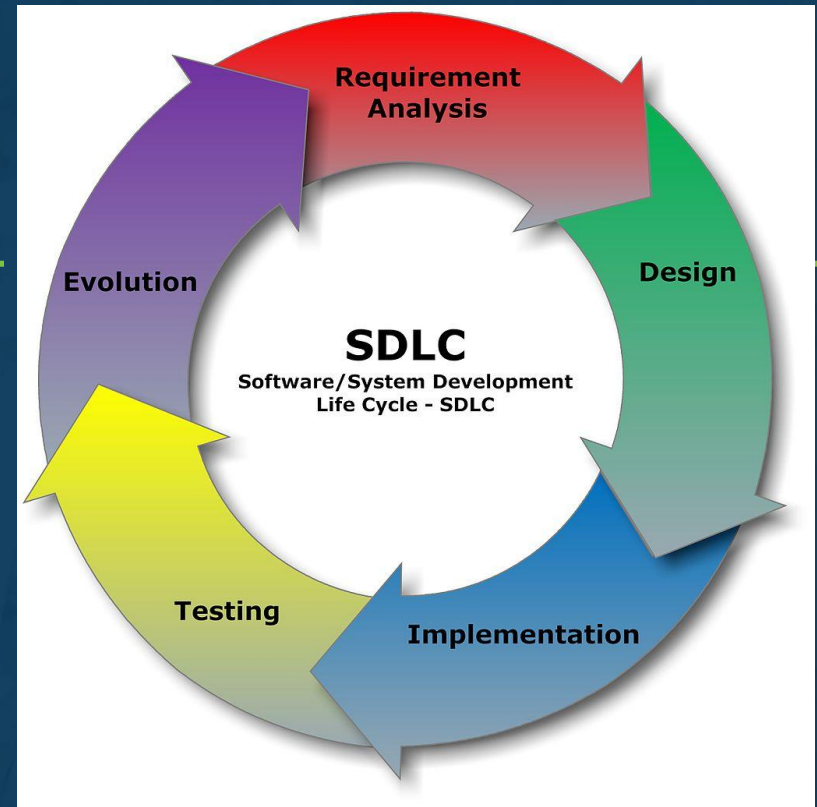

Randy Heiland and Susan Sons

<http://hdl.handle.net/2022/21322>

# Secure Coding

- Requirements
- Design
- Implementation
- Testing

Source:  
[https://commons.wikimedia.org/wiki/File:SDLC\\_-\\_Software\\_Development\\_Life\\_Cycle.jpg](https://commons.wikimedia.org/wiki/File:SDLC_-_Software_Development_Life_Cycle.jpg)

Secure Coding Practices and Automated Assessment Tools  
Prof. Barton P. Miller & Prof. Elisa Heymann

<http://hdl.handle.net/2022/21325>

# Identity and Access Management (IAM)

## Who can do what?

---

- Managing your community
- Different levels of access
- Who manages Groups/Communities/VOs?
- Local password or federated identity?
- User lifecycle

Federated Identity Management for Research Organizations

Jim Basney, Scott Koranda

<http://hdl.handle.net/2022/21329>

Facilitating Scientific Collaborations by Delegating Identity Management: Reducing Barriers & Roadmap for Incremental Implementation. Robert Cowles, Craig Jackson and Von Welch.

<http://hdl.handle.net/2022/20357>

# Identity and Access Management (IAM)

## Don't reinvent the wheel

---

IAM services/software serving research use cases:

- CILogon: IAM service supporting InCommon IDs  
<https://cilogon.org/>
- Globus Auth: OAuth-based IAM platform service  
<https://docs.globus.org/api/auth/>
- InCommon: trust fabric for US R&E  
<https://incommon.org/>
- ORCID: persistent researcher identities  
<https://orcid.org/>

IAM Best Practices, Training, and Resources  
<https://trustedci.org/iam>

Full disclosure: CTSC team members have professional and personal ties to these projects.

# Cybersecurity Operations

## Keeping Everything Going

---

- Ongoing program to manage risks
- Patching, incident detection, incident response
- Knowing your upstream software providers?
- Communications with your community and resource providers.

“Developing Cybersecurity Programs for NSF Projects”  
Bob Cowles, Craig Jackson, Jim Marsteller, Susan Sons  
<http://hdl.handle.net/2022/21327>

# Other Resources

---

“Science Gateway Security Recommendations”

J. Basney, V. Welch
